Version: As Reported by House Families, Aging, and Human Services

Primary Sponsors: Reps. Schmidt and Denson

Emma Carroll, Research Analyst

SUMMARY

- Revises the law governing health insurance and Medicaid coverage of screening mammography.
- Requires health insurers and the Medicaid program to cover supplemental breast cancer screening if certain conditions are met.
- Revises the language a mammography facility must use when notifying a mammography patient in writing of the presence of dense breast tissue.

DETAILED ANALYSIS

Current Ohio statutory law requires the Medicaid program and the following types of health insurers to cover or provide benefits for the expenses of screening mammography (to detect the presence of breast cancer) and cytologic screening (to detect the presence of cervical cancer): health insuring corporations, sickness and accident insurers, and public employee benefit plans.¹ The bill revises this law in two main ways, first by eliminating certain coverage limits for screening mammography and second, by requiring coverage of supplemental breast cancer screening in specified circumstances. It also makes changes to the law governing written notice to mammography patients regarding dense breast tissue.

Coverage of screening mammography

Under existing law, how often screening mammography must be covered by the Medicaid program and the foregoing insurers depends on the woman's age and risk factors for breast cancer. For instance, if a woman is at least 35 but under 40 years of age, the law requires coverage of one screening mammography, without reference to the timing or frequency of the

¹ R.C. 1751.62, 3923.52, 3923.53, and 5164.08.

screening. If a woman is at least 40 but under 50 years of age, one screening mammography is covered every two years, except that if a physician has determined that she has risk factors, one screening mammography is covered every year. Finally, in the case of a woman who is at least 50 but under 65 years of age, one screening mammography is covered every year.

The bill instead requires coverage of one screening mammography every year, regardless of the woman's age or risk factors.² It also specifies that the coverage includes digital breast tomosynthesis.

Screening mammography definition

The bill maintains the current law definition of "screening mammography," but specifies that it also includes digital breast tomosynthesis.³ At present, screening mammography includes the x-ray examination of the breast using equipment that is dedicated specifically for mammography. Digital breast tomosynthesis is a three-dimensional imaging technology that involves acquiring images at multiple angles during a scan. The images are reconstructed into a series of thin high-resolution slices that can be displayed individually or in a dynamic mode.⁴

Coverage of supplemental breast cancer screening

The bill requires the Medicaid program and health insuring corporations, sickness and accident insurers, and public employee benefit plans to cover supplemental breast cancer screening in specified circumstances.⁵

Types of supplemental breast cancer screening

Under the bill, supplemental breast cancer screening means any additional screening method deemed medically necessary by a treating health care provider for proper breast cancer screening in accordance with applicable American College of Radiology Guidelines. Supplemental breast cancer screening includes magnetic resonance imaging (MRI), ultrasound, and molecular breast imaging.⁶

Eligibility

To be eligible for supplemental breast cancer screening coverage under the bill, an adult woman must meet either of the following conditions:

² R.C. 1751.62(C), 3923.52(C), 3923.53(B), and 5164.08(C).

³ R.C. 1751.62(A)(1), 3923.52(A)(1), and 5164.08(A)(1).

⁴ The American College of Obstetricians and Gynecologists, *Digital Breast Tomosynthesis*, Technology Assessment Number 9 (reaffirmed 2020), available at <https://www.acog.org/clinical/clinical-guidance/technology-assessment/articles/2013/06/digital-breast-tomosynthesis>.

⁵ R.C. 1751.62(B), 3923.52(B), 3923.53(A), and 5164.08(B).

⁶ R.C. 1751.62(A)(3), 3923.52(A)(2), and 5164.08(A)(2).

- The woman’s screening mammography demonstrates, based on the breast imaging reporting and data system established by the American College of Radiology, that the woman has dense breast tissue; or
- The woman is at increased risk of breast cancer due to family history, prior personal history of breast cancer, ancestry, genetic predisposition, or other reasons as determined by the woman’s health care provider.⁷

Reimbursement rates and payment

The bill expands the current law insurance reimbursement limits pertaining to screening mammography to also apply to supplemental breast cancer screening. With respect to benefits provided by health insuring corporations, sickness and accident insurers, and public employee benefit plans, current law limits the total benefit for screening mammography to 130% of the Medicare reimbursement rate in Ohio. However, if there is more than one Medicare reimbursement rate in Ohio, the reimbursement rate is 130% of the lowest Medicare reimbursement rate. The bill applies these provisions to the reimbursement rates for supplemental breast cancer screening. Under the bill, therefore, the reimbursement rates for supplemental breast cancer screening is limited to 130% of the Medicare reimbursement rate for that supplemental screening and will depend on the type of screening utilized.

Location of supplemental breast cancer screening

As a condition of coverage, the bill requires the supplemental breast cancer screening to be performed either in a facility or mobile mammography screening unit that is accredited by the American College of Radiology or in a hospital.⁸ This same condition also applies under current law to the coverage of screening mammography.

Exemption from review by the Secretary of Insurance

It could be argued that by requiring health insurers to cover supplemental breast cancer screening in accordance with the bill’s provisions, the bill might establish a mandated health benefit. Under current law, if the General Assembly enacts a mandated health benefit, it cannot be applied to any health benefit plan until the Superintendent of Insurance determines that the benefit also can be applied fully and equally in all respects to employee benefit plans subject to the federal “Employee Retirement Income Security Act of 1974” (ERISA),⁹ and to employee

⁷ R.C. 1751.62(C), 3923.52(C), 3923.53(B), and 5164.08(C).

⁸ R.C. 1751.62(E), 3923.52(E), 3923.53(D), and 5164.08(D).

⁹ 29 United States Code 1001 *et seq.*, not in the bill. ERISA is a comprehensive federal statute governing the administration of employee benefit plans. ERISA generally precludes state regulation of benefits offered by private employers that self-insure their benefit programs. Larger employers frequently choose to establish their own health insurance plans for their employees in lieu of purchasing coverage from a sickness and accident insurer or health insuring corporation.

benefit plans established or modified by the state or any of its political subdivisions.¹⁰ The bill exempts its requirements from this restriction.¹¹

Dense breast tissue notice to patients

Federal law requires a mammography facility to send to each patient who has a mammogram performed at the facility a summary of the written report of the mammogram results.¹² The summary must be written in lay terms and sent to the patient not later than 30 days after the mammogram was performed. If the written report's overall final assessment of findings is "suspicious" or "highly suggestive of malignancy," as defined by federal law, the facility must make reasonable attempts to ensure that the results are communicated to the patient as soon as possible.¹³

In general, Ohio law has codified federal law concerning summaries of written mammography reports. In addition, it requires a summary to include the following notice if a patient's mammogram demonstrates, based on American College of Radiology Standards, that the patient has dense breast tissue:¹⁴

Your mammogram demonstrates that you have dense breast tissue, which could hide abnormalities. Dense breast tissue, in and of itself, is a relatively common condition. Therefore, this information is not provided to cause undue concern; rather, it is to raise your awareness and promote discussion with your health care provider regarding the presence of dense breast tissue in addition to other risk factors.

The bill revises the foregoing notice and directs that it read as follows:¹⁵

Your mammogram shows that your breast tissue is dense. Dense breast tissue is very common and is not abnormal. However, dense breast tissue can make it harder to find cancer on a mammogram and also may increase your risk of developing breast cancer. Because you have dense breast tissue, you could benefit from additional imaging tests such as a screening breast

¹⁴ R.C. 3702.40(B).

¹⁵ R.C. 3702.40(B).

ultrasound or breast magnetic resonance imaging. This information about your breast density is being provided to you to raise your awareness. It is important to continue routine screening mammograms and use this information to speak with your health care provider about your own risk for breast cancer. At that time, ask your health care provider if more screening tests might be useful based on your risk. A report of your mammogram results was sent to your health care provider.
